

Going out onto the Internet

LESSON SCRIPT

1. The risks in the browser

2. What to look for

3. Configuring the browser

4. Putting it into practice

Glossary of Terms

Browser	A browser is a computer program or mobile app that is used to find and look at information on the Internet.
Cache	A cache is where a device can temporarily store some data to speed up future requests.
Certificate	Electronic certificates are used to verify the identity of a webpage
Cookie	A small piece of information stored on a persons browser for use by a website.
Domain name	The name given to help find a computer on the Internet (e.g. serene-risc.ca).
Drive-by download	A drive-by-download attack infects your computer with malware just by visiting a page.
Encryption	A process of converting information to a form unreadable to untrusted parties that still contains the original information and is able to be read by the intended recipient.
Extended validation certificate	A certificate that shows that website has gone through some extra validation process to confirm that it is legitimate and indicates the owner of the page.
IP address	An Internet Protocol (IP) address is a set of numbers that a device (computer, printer, etc.) on the Internet uses to identify itself (e.g. 206.167.212.121).
Malvertising	Malicious programs hidden in advertising.
Malware	Software designed primarily for a malicious purpose.
Man-in-the-middle attack	A malicious attack against communications executed between the sender and receiver.
Operating system	An operating system is the main program in a computer such as windows or Apple OSX that makes it possible for other programs to function.
Phishing	Emails, calls or other communication designed to trick you to give away personal information or passwords.
