

Internet Concepts

HAND-OUT SHEET

The Internet can be used for:

- a) Email, contacting friends, watching movies or TV shows, checking sports scores
- b) Taking courses, reading books, publishing opinions, sharing photos
- c) Video chat, banking, reading news, research, playing games
- d) All of the above

The Internet can be risky because:

- a) You can only trust websites from big companies
- b) Our usual ways of knowing who we are talking to and who to trust aren't available
- c) There are more criminals online than there are in the real world
- d) You can waste a whole day watching videos of cute kittens

Information is transferred across the Internet:

- a) In secure channels that ensure privacy
- b) In a series of data packets that can be read by each computer they pass through
- c) In tamper evident packaging for your safety
- d) In a series of data packets that cannot be read by each computer they pass through

An Internet Service Provider (ISP):

- a) Fixes the Internet when it breaks
- b) Is the company that stores the entire Internet
- c) Connects you to the Internet
- d) Is always a telephone company

A Secure Wi-Fi connection:

- a) Has a little yellow shield next to it
- b) Requires a password the first time you connect to it
- c) Has a long name
- d) Stays indoors

A Public Wi-Fi connection:

- a) Is safe if many people use it
- b) Is safe if it requires a password
- c) Is not safe enough to use for sensitive purposes such as banking
- d) Is safe if you wash your hands after using it
